PROFESSIONAL SUMMARY

Worked on developing applications using Java, Python, and JavaScript across full-stack development and intelligent systems. Built scalable web platforms, backend services, and data-driven applications using React.js, Node.js, Java Servlets, JSP, and REST APIs. Familiar with modular architectures, database management, and creating efficient applications focused on performance, usability, and real-time functionality.

EDUCATION

Master of Computer Applications (MCA) 2025 – 2027
Vellore Institute of Technology (VIT), Vellore, India

Bachelor of Computer Applications (BCA) 2021 – 2024
College of Commerce, Arts & Science, Patna, India

PROJECTS

AI-powered Legal Document Analyzer (Python, FastAPI, NLP, Transformers)

- Developed a Chrome extension to analyze Terms of Service and Privacy Policies, identifying high-risk clauses in real time.
- Architected a hybrid pipeline (rule-based + transformer models) for clause detection and risk assessment.
- Designed a FastAPI backend enabling real-time text preprocessing and sentence segmentation.
- Implemented clause consolidation and a deterministic risk scoring engine (Low/Medium/High).
- Applied confidence-based logic to selectively invoke LLM for refining explanations in low-confidence cases.
- Transformed unstructured legal text into structured representations for downstream analysis.
- Delivered multilingual output with real-time summaries, risk scores, and key concerns.

Microservices-Based E-Commerce System (React.js, Node.js, MongoDB)

- Designed and developed a distributed microservices-based e-commerce platform using the MERN stack.
- Built independent services for user authentication (JWT), product management, order processing, inventory tracking, notifications
- Implemented event-driven architecture using RabbitMQ to enable asynchronous communication between Order, Inventory, and Notification services.
- Integrated Redis caching to optimize performance and reduce database load for frequently accessed data.
- Established REST-based inter-service communication using Axios, ensuring seamless coordination across services.
- Containerized microservices using Docker to support scalable and consistent deployment environments.

Campus Food Management System (Java, Servlets, JSP, MySQL)

- Developed a web-based campus food ordering and cafeteria discovery platform using **Java Servlets and JSP** following MVC architecture, with a **MySQL database** managing users, menus, cafeterias, and orders.
- Implemented **Google Maps navigation** for cafeteria discovery and optimized CRUD operations for efficient data handling.

TECHNICAL SKILLS

Programming: Python, Java, JavaScript

Data Analytics & Processing: Python Data Analysis, Pandas, NumPy, Data Cleaning, Data Transformation, Data Analysis, ETL Processes

Machine Learning & NLP: Scikit-learn, NLP, HuggingFace Transformers

Web Development: React.js, JSP, Servlets

Backend & APIs: Spring Boot, Node.js, RESTful APIs

Databases: MySQL, MongoDB

Data Visualization & BI Tools: Matplotlib, Seaborn, Power BI, Advanced Excel

Tools & Platforms: Git, Jupyter Notebook

CERTIFICATIONS

Programming using Java (Infosys Springboard) • Career Essentials in Generative AI (Microsoft, LinkedIn Learning) • Oracle Java Foundations (Oracle University) • AI/ML for Geodata Analysis (ISRO) • Generative AI Virtual Internship (Skillible, 6 weeks)
